

Please activate your account to start sending emails. We sent an activation email to **olauisers@gmail.com**. [Resend activation](#). [Update email address](#).

CREATED MAIL.UISE.COM.BR

Now Follow These Steps To Verify Your Domain

1. Go To Your DNS Provider

Go to the DNS provider that you use to manage mail.uise.com.br and add the following DNS records.

Common providers include [GoDaddy](#), [NameCheap](#), [Network Solutions](#), [Rackspace Email & Apps](#), [Rackspace Cloud DNS](#), [Amazon Route 53](#) and [Digital Ocean](#).

2. Add DNS Records For Sending

TXT records (known as SPF & DKIM) are **required to send and receive email** with Mailgun.

Type	Hostname	Enter This Value
TXT	mail.uise.com.br	v=spf1 include:mailgun.org ~all
TXT	mx._domainkey .mail.uise.com.br	k=rsa; p=MIGfMA0GCSqGSIb3DQEBAQUAA4GNADCBiQ

MX records are **recommended for all domains, even if you are only sending messages**. Unless you already have MX records for `@mail.uise.com.br` pointing to another email provider (e.g. Gmail), you should update the following records. [More info on MX records](#) [↗](#).

Type	Priority	Enter This Value
MX	10	mx.a.mailgun.org
MX	10	mx.b.mailgun.org
